< 38°C (100°F)

**\* 8 Exposure controls and personal protection**

**Additional information about design of technical systems:**

No further data; see item 7.

**Components with limit values that require monitoring at the workplace:**

The product does not contain any relevant quantities of materials with critical values that have to be monitored at the workplace.

*Additional information:*

The lists that were valid during the creation were used as basis.

**Personal protective equipment:**

*General protective and hygienic measures:*

Keep away from foodstuffs, beverages and feed.  
Immediately remove all soiled and contaminated clothing.  
Wash hands before breaks and at the end of work.  
Avoid contact with the eyes and skin.

*Breathing equipment:*

Local exhaust ventilation is recommended when general ventilation is not sufficient to keep vapor or mist concentrations below permissible exposure limits (See ACGIH – Industrial Ventilation). Follow the OSHA respirator regulations found in 29 CFR 1910.134 or European Standard EN 149. Use a NIOSH/MSHA or European Standard EN 149 approved respirator if permissible exposure limits are exceeded, if irritation occurs or other symptoms are experienced.

*Protection of hands:*

Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.  
Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

*Material of gloves*

Nitrile rubber, NBR

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

*Penetration time of glove material*

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

*Eye protection:*

Eye protection with side shields. When there is a potential for a splash hazard, chemical goggles should be used.
